EDUCATION

Cebu Institute of Technology – University (CIT-U)
Bachelor of Science in Computer Science (BSCS) | 3rd Year

- **Scholarships & Honors:** Consistent Dean's Lister

Cebu Institute of Technology – University (CIT-U)
Senior High School – Science, Technology, Engineering, and Mathematics (STEM)

- **Honors:** Graduated with Honors

TECHNICAL SKILLS

- **Languages:** Python, C, C++, C# (.NET), Java, Kotlin, PHP, JavaScript, SQL, HTML/CSS, GoDot
- **Frameworks & Mobile:** Android Development (Kotlin), Node.js, Django, React Native, JavaFX, Java Swing
- **Cloud & Tools:** AWS (Serverless, Model Hosting), Git, REST APIs, FastAPI, Linux/macOS, n8n, Supabase, Azure

FEATURED PROJECTS

Parola – AI-Powered Maritime Advisory Platform | Backend Developer / AI & Data Integration
AI Fest Hackathon 2026 (Iloilo City)

- Developed a FastAPI backend for an AI-assisted fishing recommendation platform, integrating marine, weather, and safety data, using PAGASA and Open-Matero API
- Built data pipelines using Python, xarray, and NetCDF to process Copernicus Marine environmental datasets, including ocean temperature, currents, salinity, and chlorophyll-a.
- Integrated Supabase PostgreSQL for persistent storage and developed REST API endpoints for environmental data retrieval and updates.
- **Deployed and configured cloud-based automation infrastructure** for scheduled environmental data processing and API synchronization.

BantAI Buddy – AI-Powered Messaging Safety Extension | AI / Backend Developer
Inter-School Hackathon – IT & Business Process Association of the Philippines (2nd Place)

- Implemented Azure OpenAI integration for automated detection of toxic, threatening, sexual, predatory, and cyberbullying content.
- Developed the extension's multilingual moderation logic for English, Cebuano, and Tagalog messages..
- Developed the educational feedback mechanism that explains why content was flagged.
- Contributed to the development of the Chrome Extension Manifest V3 architecture and messaging-platform integration.

IMentia – Facial Recognition & Memory Assistant | Backend Developer
Java, OpenCV, Java Swing

- Implemented the application's HashMap-based data management to prevent duplicate person records.
- Developed functionality for storing and retrieving relationship and conversation information associated with recognized individuals.

+inHealth – Desktop Health & Activity Tracker | Backend Developer
Java, JavaFX

- Implemented the API integration used to calculate users' calorie expenditure and related health metrics.
- Integrated API responses into the JavaFX interface for displaying calculated health information.

PantryPlanner – Smart Meal Planning Android Application | Full Stack Developer
Kotlin

- Developed the entire application independently using Kotlin.
- Implemented the MVP architecture to separate UI, business logic, and data handling.
- Integrated REST APIs to retrieve recipe information and generate ingredient-based recommendations.

CERTIFICATIONS & TRAINING

- **AI Fest 2026 Technical Training Series**
  - Agile Prototyping & Technical Execution (July 2026)
  - Technical Architecture & Data Ethics (July 2026)
  - Human-Centric AI & Problem Solving (July 2026)
- **AI Ready ASEAN Certificate of Completion** | ASEAN Foundation
- **Cebu ICT Student Congress** | Philippine Society of Information Technology Educators (PSITE)
- **Generative AI Training & RAG Implementation** | Accenture Philippines (July 2025)
